Android Enterprise

Google  
provides end  
to end AI  
infrastructure

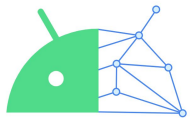

## Cloud

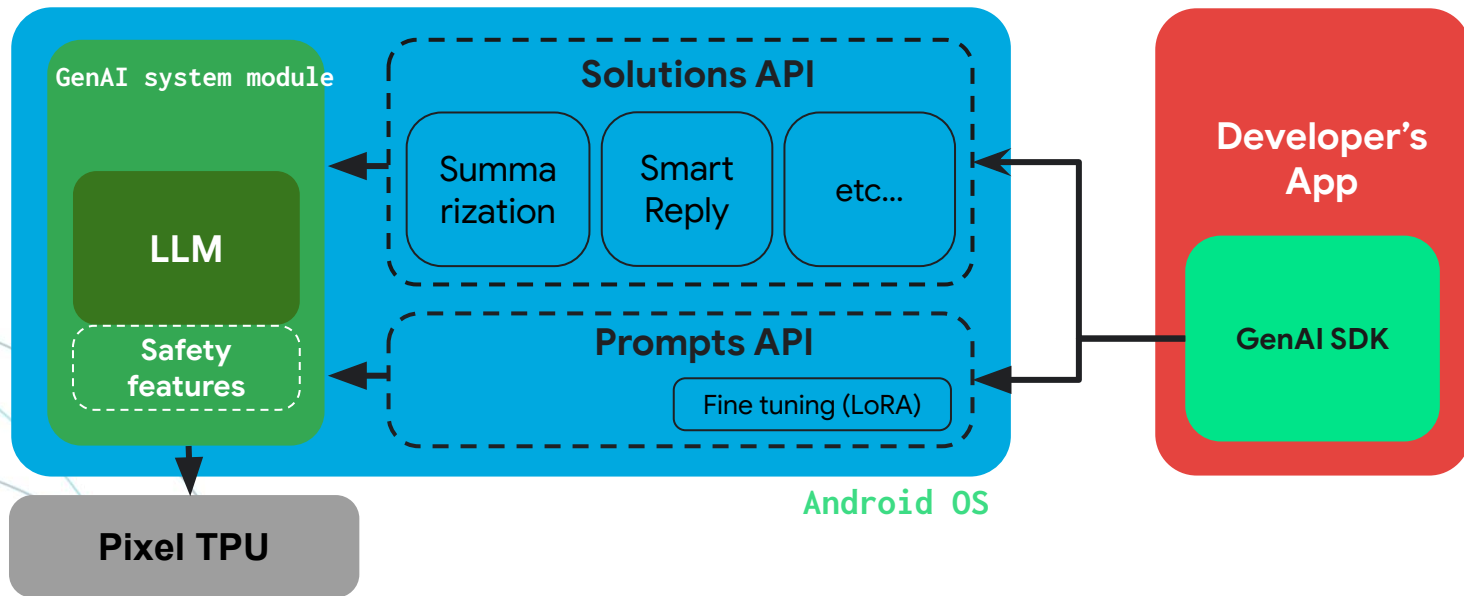

## Devices

# AI Core + Gemini Nano

Google's cutting-edge models optimized for mobile directly provided by Android OS

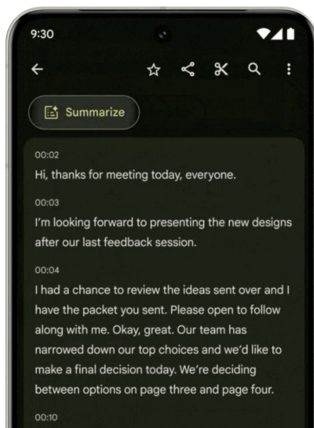

# So what's new?

## Using a production example from Pixel

### Traditional AI: Pattern recognition

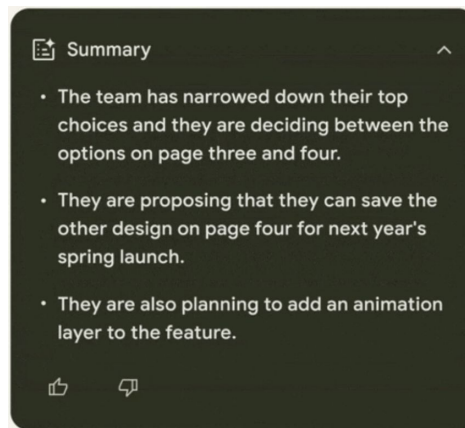

Traditional AI systems are primarily used to analyze data and make predictions or classify information

Recognizing speech and converting to text

### Generative AI: Pattern creation

Generative AI goes a step further by creating new data similar to its training data

Create new content by summarizing existing text
